## NUKE COSMOS

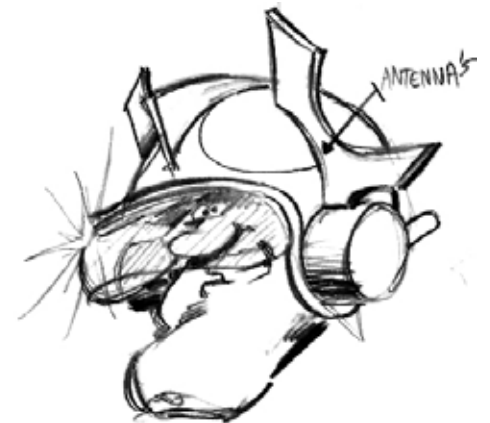

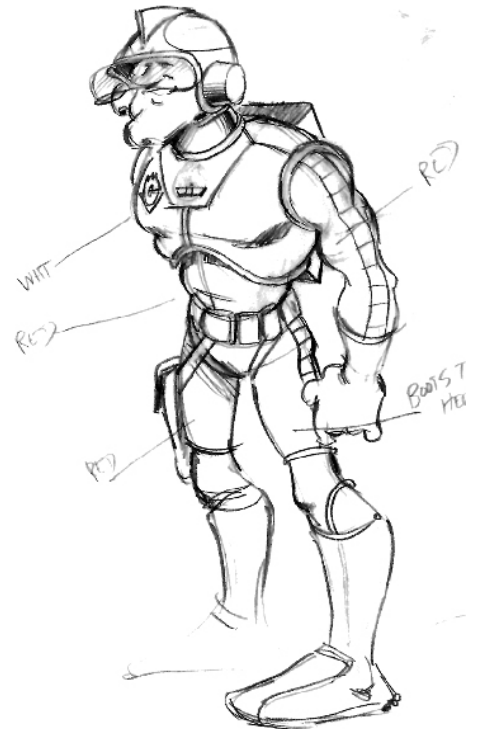

### Notes from sketch illustrations and design direction:

**T**op of helmet is lined with holes that shoot an oxygen mixture down over top of face allowing Nuke to breathe in space. His solar jetpack is equipped with a radio—transmissions are picked up on receivers on both sides of helmet over ears.

**W**hen Nuke Cosmos met Captain Energy and joined the Energy Forces, he received his Energy Force Badge, which he wears proudly.

**N**uke Cosmos wears a standard uniform of some sort of future armed forces of another galaxy (thus the name on chest). Nuke drove his space ship by earth and met Captain Energy or something/or earth is his assignment. He doesn't necessarily have to be from the future—maybe just the same time period but a more advanced planet in space. Nuke reports to his leader the problems and the answer earth received in latest adventure. Nuke could call into his home planet and plug into computers for help in tough situations.

**B**eing from the future, Nuke's civilization knows much more advanced types of energy or how to use it better or something. However, being a galactic space cadet or whatever, his military ranking was or is, he has taken a vow not to disturb the natural progress of civilizations (secret Galaxy Code). However, he can be helpful such as helping earth use energy resources more efficiently or tapping other resources more fully. Basically, he just can't give any advanced information, such as how his solar jet pack is used, to earth. It must come about and discover these things on her own! (His whole planet is run on solar cells.)
